To use another program with the file, you'll just need to start that other program manually first, and then browse your computer for the particular file to open it. For example, you can open Microsoft Word and use its File > Open menu to open a DOC file that is normally associated with OpenOffice Writer, but doing so doesn't actually change the file association for DOC files as explained above.

In the most general case, the extension author might have foreseen that compiling the extensions would be complicated, and provided a Setup file for you to edit. This will likely only be done if the module distribution contains many separate extension modules, or if they often require elaborate sets of compiler flags in order to work.
