The main goal is to present a detailed analysis of their mathematical and physical properties. Wave equations are time dependent. However, use of the Fourier trans form reduces their study to that of harmonic systems: the harmonic Helmholtz equation, in the case of the acoustic equation, or the harmonic Maxwell system.

This paper presents a new single-source surface integral equation (SS-SIE) to model composite penetrable objects. In the proposed formulation, the surface electric and magnetic fields on all interior boundaries are first eliminated through combining integral solutions inside each object. Then, by enforcing the surface electric fields in the original and equivalent configurations are equal to ...

Field Equation Methods in Acoustic and Electromagnetic Scattering George C. Hsiao Abstract The essence of the boundary- eld equation method is the reduction of the boundary value problem under consideration to an equivalent nonlocal bound-ary value problem in a bounded domain by using boundary integral equations.
