Addressable Fire Alarm System Product

An addressable fire alarm system is made up of a series of fire detectors and devices

Read Book

Addressable Fire Alarm System

that are connected back to a central control panel. With addressable systems, each device has an address or location, enabling the exact detector that was triggered to be quickly identified. This makes addressable alarm systems ideal for large buildings, particularly commercial premises spread over a wide area.

Alarm System

systems use digital technology to transfer information. Unlike conventional fire alarm systems that use electric current to send information from one device to the control panel, Addressable fire alarm system devices will send the messages to the control panel as a binary code i.e. a combination of ones and zeros.
