...about machine learning since learning algorithms are, in fact, algorithms. At a high level, computational learning theory answers the same sort of questions as statistical learning theory ("What kind of guarantees can I make about my learning procedure? In what situations is learning possible?") with different tools and methodology.

It is the author's view that although the time is not yet ripe for developing a really general theory of automata and computation, it is now possible and desirable to move more explicitly in this direction. This can be done by studying in an extremely thorough way well-chosen particular situations that embody the basic concepts. This is the aim of the present book, which seeks general results ...

Computational thinking is a toolkit of thinking skills we can use when we're tackling a problem, often, but not always with a computer. Part of children's computing education in schools is developing their computational thinking skills, and the graphic you can see on screen is the Computational Thinker poster from Barefoot.
