API 650 STANDARD API 650 is the standard governing welded tanks for oil storage. It dictates tank design, fabrication, welding, inspection, and erection requirements. API 650 is widely used for tanks that are designed to internal pressures of 2.5 PSI or less and store products such as crude oil, gasoline, chemicals and produced water.

material, construction, and testing for aboveground, open and closed-top, cylindrical steel storage tanks in different capacities and sizes, roughly equating to the pressure of the atmosphere (not greater than the weight of the roof plates).

Choosing Between API 620 and 650 for Your Storage Tank

Literature review is conducted to study the basic design and requirement of the floating roof storage tank in the storage tank design code (API 650 - Welded Steel Tanks for Oil Storage). Further studies on the tank design were made from other reference book, company standard specification and information from different disciplines.

TANK provides the ability to design or analyze tanks per API-650/653 or API-620. API-650 addresses the design, fabrication, erection, and testing requirements of above-ground, welded steel, atmospheric storage tanks. (API-653 is discussed below.) The following sections of API-650 are addressed by the TANK program.
