Apollo for Travel Professionals
Welcome! This tutorial guides you through building a full-stack, GraphQL-powered app with the Apollo platform. We want you to feel empowered to build your own production-ready app with Apollo, so we're skipping "Hello World" in favor of an example that's closer to "Real World", complete with authentication, pagination, testing, and more.

0. Introduction - Apollo Basics - Apollo GraphQL Docs
When you change an itinerary after the ticket has been issued, Apollo still alerts you to verify the price. If the changes are not related to the fare, you need to tell Apollo to retain the original price. When you change the PNR after ticketing and you do not need to reissue the ticket, use the retain format to maintain the existing stored price.

Module 2: Storing the Price

By now you have probably started wondering how I made all of the text between the formatting not format. And I do that by using "noparse" it functions exactly like everything previous, but "noparse" is used instead of whatever you where using prior:[noparse]b]This is how you show someone how to bold something/[b]/[noparse].
