An echo uses sound waves to create pictures of your heart's chambers, valves, walls and the blood vessels (aorta, arteries, veins) attached to your heart. A probe called a transducer is passed over your chest. The probe produces sound waves that bounce off your heart and "echo" back to the probe. These waves are changed into pictures viewed on a video monitor.

Echocardiogram (Echo) | American Heart Association

If you have a transesophageal echocardiogram, you may be watched for a few hours at the doctor's office or hospital after the test. After the procedure.
