Artificial Intelligence in Electrical Engineering

In power systems, there are quite a lot of areas where an expert system is necessary.

This expert system is the one which can perform tasks like decision making, solving problems by reasoning, archiving knowledge. It is because sometimes, a lot of data has to be

Laboratory are working on optimization models that use machine learning, a form of artificial intelligence, to simulate the electric system and the severity of various problems. In a region with 1,000 electric power assets, an outage of just three assets can produce nearly a billion scenarios of potential failure.
