Biology of Reproduction is the official journal of the Society for the Study of Reproduction and publishes original research on a broad range of topics in the f You can change your cookie settings at any time.

Biology of Reproduction | Oxford Academic

Human reproduction is any form of sexual reproduction resulting in human fertilization. It typically involves sexual intercourse between a man and a woman. During sexual intercourse, the interaction between the male and female reproductive systems results in fertilization of the woman's ovum by the man's sperm. These are specialized reproductive cells called gametes, created in a process called meiosis. While normal cells contains 46 chromosomes, 23 pairs, gamete cells only contain 23 chromosome

Human reproduction - Wikipedia

Human-being like most of mammals are unisexual or dioecious (sexes are separate). Each human-being has only either male or female gonads (primary sex organs) reproductive ducts and accessory genital structures (secondary sex organs). Human Male Reproductive System It is concerned with sperm formation.

Human Reproduction Chapter 3 Class 12 Biology

The human male and female reproductive cycles are controlled by the interaction of hormones from the hypothalamus and anterior pituitary with hormones from reproductive tissues and organs. In both sexes, the hypothalamus monitors and causes the release of hormones from the anterior pituitary gland.
