freddiemercurystwin. The lead upstand should be a minimum of 150mm up from the tiles so this would normally be at least 2 bricks up from the back of the tiles, the lead should sit directly beneath the cavity tray, there should be a proprietary weep hole in the gaps to stop the bees if nothing else.

Type E cavity tray installation | DIYnot Forums

For this reason, building regulations require cavity trays to prevent water penetration where the cavity of an external wall is bridged or where an external wall becomes an internal wall at a lower level. Cavity trays are designed to ensure that water is diverted to the outer leaf or clear of the bridge.
