All along air movement went right over our heads, many times while visiting food-processing areas. Just like me, you probably always took them for granted, but now have a better appreciation for their use and the use of air currents and insect control. I hope PCT readers will take this to the next level and share their success stories.

Moisture transfer by air currents happens quickly, and carefully and permanently air sealing any unintended paths for air movement in and out of the house is a very effective moisture control strategy. The other two driving forces -- diffusion through materials and heat transfer -- are much slower processes.
