Lining materials protect the weak tooth from post-operative hypersensitivity, reducing patient discomfort and allowing the tooth to heal at a faster rate after the procedure. Some dental restorative materials such as acrylic monomers in resin-based materials and phosphoric acid in silicate materials may pose toxic and irritable effects to the pulp. Lining materials protect the tooth from the aforementioned irritants.

Among the usual dental materials, ceramics exhibit the lowest adhesive capability due to their inert surface. Based on various papers, zirconia dental ceramics, for instance, manifest lower adherence than metals, or even natural teeth. Some of the most common dental materials and the characteristics of the formed biofilm are presented in Table 7.2. It must be mentioned that based on the literature data, the experimental differences are notable and consequently their comparison is only ...

Dentures (also known as false teeth) are prosthetic devices constructed to replace missing teeth, and are supported by the surrounding soft and hard tissues of the oral cavity. Conventional dentures are removable (removable partial denture or complete denture). However, there are many denture designs, some which rely on bonding or clasping onto teeth or dental implants (fixed prosthodontics).

Advances in modern dental materials enable patients to have teeth that are decayed, damaged, or worn repaired with tooth-colored fillings. At Harmony Dental Arts, we can repair teeth and replace old fillings using a natural-looking composite resin closely matched to the color of the patient's teeth.
