Enable 802.1X. Issue the command below. dot1x system-auth-control  
Configure switch ports. Next step is to configure each switch port that will use 802.1X. This command will automatically include dot1x pae authenticator in the running configuration so don't be alarmed if you see it there. This is to ensure that dot1x authentication still works on legacy configurations without manual intervention.

Authentication process works in 802.1x, and provides the detailed steps to implement 1x in a switched LAN environment using Cisco's Implementation of 802.1x.

### **SANS Institute Information Security Reading Room**

802.1X offers the following benefits on wired networks: • Visibility—802.1X provides greater visibility into the network because the authentication process provides a way to link a username with an IP address, MAC address, switch, and port. This visibility is useful for security audits, network forensics, network use statistics, and troubleshooting.
