Long-acting contraceptives: implants and IUDs Long-acting contraceptives include progestogen (levonorgestrel) implants, and copper or levonorgestrel intrauterine devices (IUDs). These are the most effective forms of contraception and are recommended as a preferred option in patients who do not wish to become pregnant for a number of years, including those who are young or nulliparous.

Long Acting Injections and Implants eBook by ...

New conversations are starting in HIV care as phase III trials have shown that monthly injections of cabotegravir and rilpivirine (Edurant) are non-inferior to a three-drug pill regimen. In 2018, TheBody asked a range of people living with HIV about their willingness to switch to an injectible, and most had mixed feelings. But even if there's widespread interest in this new way of taking ...
