The next most frequently occurring malignancy is cholangiocarcinoma. This disease accounts for about 10% to 12% of all hepatic malignancies. The remaining liver primaries are rare and include...

Malignant tumors of the liver - Cancer Therapy Advisor

What are cancerous liver tumors? Cancerous (malignant) tumors in the liver have either originated in the liver (primary liver cancer) or spread from cancer sites elsewhere in the body (metastatic liver cancer). Most cancerous tumors in the liver are metastatic. What is hepatoma (primary liver cancer)? Also called hepatocellular carcinoma, this is the most common form of primary liver cancer.

Malignant Liver Tumors on Apple Books

Liver cancer is a type of malignant tumor that begins in the liver, the largest internal organ in the body. Most liver cancers develop from the cells in the liver called hepatocytes. These cancers are referred to as primary liver cancer. Rarely, they may develop from cells lining the bile duct or the blood vessels.

Malignant Hepatic (Liver) Lesions - Cleveland Clinic

Primary liver cancer, which starts in the liver, accounts for about 2% of cancers in the U.S., but up to half of all cancers in some undeveloped countries.

Liver Cancer Causes, Survival Rate, Tumor Types, and More

Liver cancer, also known as hepatic cancer and primary hepatic cancer, is cancer that starts in the liver. Cancer which has spread from elsewhere to the liver, known as liver metastasis, is more common than that which starts in the liver. Symptoms of liver cancer may include a lump or pain in the right side below the rib cage, swelling of the abdomen, yellowish skin, easy bruising, weight loss and weakness. The leading cause of liver cancer is cirrhosis due to hepatitis B, hepatitis C or alcohol

Liver cancer - Wikipedia

Primary malignant neoplasms of the liver are classified by the cell of origin (Box 87-1). Secondary malignant liver tumors are metastases and lymphomas. Overall, metastases are the most frequent malignant tumors of the liver, except in patients with preexisting cirrhosis, in whom primary malignant neoplasms are more frequent. Box 87-1
