Molecular thermodynamics of fluid-phase equilibria. This book is used as graduate text for GTech, ChBE course, and suffices in context of summarizing a large amount of material on fugacities in mixtures, empirical methods used for prediction and analysis of phase equilibria problems. With no previous exposure to Chemical Engineering Thermodynamics, I found Smith and Van Ness to be greatly helpful in explaining basic concepts, and providing a lucid, logical development of the subject.

The analogy comes from a quotation of Sir Francis Bacon discussed in the preface of the 2nd ed. of Molecular Thermodynamics of Fluid-Phase Equilibria. Experimenters are like ants; they only collect and use. Theoreticians resemble spiders that make cobwebs out of their own substance. But bees gather materials from the flowers and digest them by ...
