This technical guide describes a method for calibrating both fixed volume and variable volume piston pipettes with volumes from below 1 μL to above 10 mL. The guide covers the necessary equipment, the method and how it relates to ISO Standards for piston pipettes, the necessary calculations and the measurement uncertainties.

I found it in the MSL Technical Guide 25: Calibrating Balances several years ago and decided to give it a try. Today, MSL has replaced this formula in their Technical Guide 25, but I still prefer to use it sometimes. I like the method because it takes changes at zero into account. However, it only evaluates hysteresis at midscale.
