Nondestructive testing (NDT) is a wide group of analysis techniques used in science and technology industry to evaluate the properties of a material, component or system without causing damage. The terms nondestructive examination (NDE), nondestructive inspection (NDI), and nondestructive evaluation (NDE) are also commonly used to describe this technology.

Nondestructive testing - Wikipedia

Non-destructive testing (NDT) is a testing and analysis technique used by industry to evaluate the properties of a material, component, structure or system for characteristic differences or welding defects and discontinuities without causing damage to the original part. NDT also known as non-destructive examination (NDE), non-destructive inspection (NDI) and non-destructive evaluation (NDE).

Materials Evaluation, August 2020. The August Materials Evaluation explores the inspection of composite materials often used in aerospace applications, including a Fellowship Paper on a hybrid microwave system for rapid inspection of GFRP composites and an analysis of the types of discontinuities that occur in polymer composite materials and multilayer glued structures.

The American Society For Nondestructive Testing

When comparing destructive and nondestructive testing, destructive testing is, in some ways, the most reliable method. However, nondestructive testing (NDT) retains a significant advantage over destructive testing because it covers more ground and saves on material costs. With NDT, analysts can avoid damaging assets and find more flaws in the process.
