In software

engineering, profiling

("program profiling",

"software profiling") is

a form of dynamic

program analysis that

measures, for example,

the space (memory) or

time complexity of a

program, the usage of

particular instructions,

or the frequency and

duration of function

calls. Most commonly,

profiling information serves to aid program optimization.

Profiling (computer programming) - Wikipedia

IBM decided in 1980 to market a low-cost single-user computer as quickly as possible. On 12 August 1981, the first IBM PC went on sale. There were three operating systems (OS) available for it. The least
