uses the Seismic Design Category (SDC) concept to categorize structures according to the seismic risk they could pose. There are six SDCs ranging from A to F with structures posing minimal seismic risk assigned to SDC A and structures posing the highest seismic risk assigned to SDC F. As a structure's

## **5.1 Seismic Design Categories**

In ASCE 7-16, the Seismic Design Category (SDC) is a function of Risk Category and soil modified seismic risk in the form of  $S_{DS}$  and  $S_{D1}$  and is determined from Tables 11.6-1 and 11.6-2. For a given nonbuilding structure, SDC is determined twice - first as a function of  $S_{DS}$  and a second time as a function of  $S_{D1}$ .
