was long and flexible, perfect for swimming swiftly through the water.

### **Homework - Westerville City School District**

Mesosaurus was approximately 3 feet long and weighed around 20 pounds. That made it the size of a yardstick and about the weight of a Dachshund dog. It was an anapsid reptile - which means it didn't have the openings in the sides of its skull that therapsids and pelycosaur had. No, it was in the same classification category as turtles are today.

### **Mesosaurus - Facts and Pictures**

No, because Wegener never could explain why the continents moved and maintained that the continents moved through the oceanic crust. Most serious objections to his theory were based on these problems. Other people claimed that Mesosaurus, Glossopteris, etc., propagated by since sunken land bridges.

## **Does the case of the Mesosaurus itself prove Wegener's**

...

Does the case of Mesosaurus support Wegener's theory? Yes because the continents would have had to be together. Does the case of the Mesosaurus by itself prove it's theory? No because you need as much evidence to solve a theory. What happens to old oceanic crust as new molten material rises from the mantle?

## **Mr. Klepfer's Science 7 Packet Test Flashcards | Quizlet**

Mesosaurus, (genus Mesosaurus), early aquatic relative of reptiles, found as fossils from the Early Permian Period (299 million to 271 million years ago) in South Africa and South America. Mesosaurus lived in freshwater lakes and ponds. Elongated and slim, it measured about 1 metre (3.3 feet) long.
