Transport: Overcoming Constraints, Sustaining Mobility - Singapore's transport policies have moved in tandem with the city's development. At one level, this can be seen as a linear progression in transport infrastructure - from 'mosquito' buses and 'pirate' taxis, to a modern bus and train system. Seen in this light, the main policy challenge was the integrated planning and development of effective transport hardware and systems.

population. Making transport by ship or rail more reliable but also better cooperation between stakeholders and harmonization are important factors. On transport services, competition remains a key issue for better services, constraints on price and a better allocation of resources, and of course less subsidies at the optimal level.

The Purpose of Transportation The unique purpose of transportation is to overcome space, which is shaped by a variety of human and physical constraints such as distance, time, administrative divisions, and topography. Jointly, they confer friction to any movement, commonly known as the friction of distance (or friction of space).
